DETAILED ACTION

Response to Argument

The examiner acknowledges the amendment filed 4/26/05 with the following effect;

Applicant's arguments with respect to claim 6 has been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 6 is rejected under 35 U.S.C. 102(b) as being anticipated by Robert J.S. Brown et al (US 3,204,178).

As to claim 6, Brown et al discloses (fig 1) a source having a impedance and connected to a load, the source comprising:

a detection circuit (column 3 line 45 - 50) to determine whether a current flow through the impedance is load (26) induced or source induced; and

a processing circuit (column 3 lines 45 - 50) to perform an operation based upon whether the current flow is load induced or source induced.

Wherein the source is the measuring instrument further comprising an output indicator which indicates whether the current flow is source induced or load induced.
